

Jürgen Ehlers Claus Lämmerzahl (Eds.)

Special Relativity

Will it Survive the Next 101 Years?

Contents

Part I Historical and Philosophical Aspects

Isotropy of Inertia: A Sensitive Early Experimental Test

<i>R.W.P. Drever</i>	3
1 Introduction	3
2 Early Ideas	4
3 Possibilities for Experiments	4
4 Some Factors Expected to Affect Sensitivity in a Simple NMR Measurement	5
5 Development of the Experimental Technique	5
6 Initial Observations	7
7 Experiments and Developments for Higher Sensitivity	7
8 Experimental Procedure	9
9 Discussion of Experimental Results	12
10 Interpretation	12
11 Some Personal Remarks	13
References	13

The Challenge of Practice: Einstein, Technological Development and Conceptual Innovation

<i>M. Carrier</i>	15
1 Knowledge and Power in the Scientific Revolution	15
2 Contrasting Intuitions on the Cascade Model	17
3 Poincaré, Einstein, Distant Simultaneity, and the Synchronization of Clocks	20
4 The Emerging Rule of Global Time	24
5 Technology-Based Concepts and the Rise of Operationalism	25
6 Technological Problems, Technological Solutions, and Scientific Progress	28
References	30

Part II Foundation and Formalism

Foundations of Special Relativity Theory

<i>J. Ehlers</i>	35
1 Introduction	35
2 Inertial Frames	36
3 Poincaré Transformations	36
4 Minkowski Spacetime	39
5 Axiomatics	40
6 The Principle of Special Relativity and Its Limits	40
7 Examples	41
8 Accelerated Frames of Reference	41
9 SR Causality	42
References	43

Algebraic and Geometric Structures in Special Relativity

<i>D. Giulini</i>	45
1 Introduction	45
2 Some Remarks on “Symmetry” and “Covariance”	46
3 The Impact of the Relativity Principle on the Automorphism Group of Spacetime	49
4 Algebraic Structures of Minkowski Space	55
5 Geometric Structures in Minkowski Space	71
A Appendices	98
References	108

Quantum Theory in Accelerated Frames of Reference

<i>B. Mashhoon</i>	112
1 Introduction	112
2 Hypothesis of Locality	113
3 Acceleration Tensor	115
4 Nonlocality	116
5 Inertial Properties of a Dirac Particle	119
6 Rotation	120
7 Sagnac Effect	121
8 Spin-Rotation Coupling	122
9 Translational Acceleration	125
10 Discussion	129
References	129

**Vacuum Fluctuations, Geometric Modular Action
and Relativistic Quantum Information Theory**

<i>R. Verch</i>	133
1 Introduction	133
2 From Quantum Mechanics and Special Relativity to Quantum Field Theory	137

3	The Reeh–Schlieder–Theorem and Geometric Modular Action	146
4	Relativistic Quantum Information Theory: Distillability in Quantum Field Theory	154
	References	160

Spacetime Metric from Local and Linear Electrodynamics:

A New Axiomatic Scheme

<i>F.W. Hehl and Y.N. Obukhov</i>	163	
1	Introduction	163
2	Spacetime	164
3	Matter – Electrically Charged and Neutral	165
4	Electric Charge Conservation	166
5	Charge Active: Excitation	166
6	Charge Passive: Field Strength	167
7	Magnetic Flux Conservation	168
8	Premetric Electrodynamics	168
9	The Excitation is Local and Linear in the Field Strength	170
10	Propagation of Electromagnetic Rays (“Light”)	173
11	No Birefringence in Vacuum and the Light Cone	175
12	Dilaton, Metric, Axion	180
13	Setting the Scale	181
14	Discussion	182
15	Summary	184
	References	184

Part III Violations of Lorentz Invariance?

Overview of the Standard Model Extension: Implications and Phenomenology of Lorentz Violation

<i>R. Bluhm</i>	191	
1	Introduction	191
2	Motivations	194
3	Constructing the SME	197
4	Spontaneous Lorentz Violation	203
5	Phenomenology	212
6	Tests in QED	215
7	Conclusions	221
	References	222

Anything Beyond Special Relativity?

<i>G. Amelino-Camelia</i>	227	
1	Introduction and Summary	227
2	Some Key Aspects of Beyond-Special-Relativity Research	232
3	More on the Quantum-Gravity Intuition	239
4	More on the Quantum-Gravity-Inspired DSR Scenario	244

5	More on the Similarities with Beyond-Standard-Model Research	272
6	Another Century?	274
	References	275

Doubly Special Relativity as a Limit of Gravity

<i>K. Imilkowska and J. Kowalski-Glikman</i>	279	
1	Introduction	279
2	Postulates of Doubly Special Relativity	280
3	Constrained BF Action for Gravity	284
4	DSR from 2+1 Dimensional Gravity	290
5	Conclusions	295
	References	296

Corrections to Flat-Space Particle Dynamics Arising from Space Granularity

<i>L.F. Urrutia</i>	299	
1	Introduction	299
2	Basic Elements from Loop Quantum Gravity (LQG)	304
3	A Kinematical Estimation of the Semiclassical Limit	312
4	Phenomenological Aspects	318
	References	340

Part IV Experimental Search

Test Theories for Lorentz Invariance

<i>C. Lämmerzahl</i>	349	
1	Introduction	349
2	Test Theories	351
3	Model-Independent Descriptions of LI Tests	354
4	The General Frame for Kinematical Test Theories	364
5	The Test Theory of Robertson	367
6	The General Formalism	376
7	The Mansouri-Sexl Test Theory	379
8	Discussion	381
	References	383

Test of Lorentz Invariance Using a Continuously Rotating Optical Resonator

<i>S. Herrmann, A. Senger, E. Kovalchuk, H. Müller, A. Peters</i>	385	
1	Introduction	385
2	Setup	387
3	LLI-Violation Signal According to SME	389
4	LLI-Violation Signal According to RMS	394
5	Data Analysis	396
6	Outlook	398
	References	400

**A Precision Test of the Isotropy of the Speed of Light
Using Rotating Cryogenic Optical Cavities**

<i>S. Schiller, P. Antonini, M. Okhapidze</i>	401
1 Introduction	401
2 Experimental Setup	402
3 Characterization of the Setup	407
4 Data Collection and Analysis	410
5 Conclusions	413
References	414

**Rotating Resonator-Oscillator Experiments
to Test Lorentz Invariance in Electrodynamics**

<i>M. E. Tobar, P.L. Stanwix, M. Susli, P. Wolf, C.R. Locke, E.N. Ivanov</i>	416
1 Introduction	416
2 Common Test Theories to Characterize Lorentz Invariance	417
3 Applying the SME to Resonator Experiments	424
4 Comparison of Sensitivity of Various Resonator Experiments in the SME	433
5 Applying the RMS to Whispering Gallery Mode Resonator Experiments	437
6 The University of Western Australia Rotating Experiment	439
7 Data Analysis and Interpretation of Results	445
8 Summary	448
References	450

Recent Experimental Tests of Special Relativity

<i>P. Wolf, S. Bize, M.E. Tobar, F. Chapelet, A. Clairon, A.N. Luiten, G. Santarelli</i>	451
1 Introduction	451
2 Theoretical Frameworks	452
3 Michelson-Morley and Kennedy-Thorndike Tests	459
4 Atomic Clock Test of Lorentz Invariance in the SME Matter Sector	468
5 Conclusion	475
References	477

Experimental Test of Time Dilation**by Laser Spectroscopy on Fast Ion Beams**

<i>G. Saathoff, G. Huber, S. Karpuk, C. Novotny, S. Reinhardt, D. Schwalm, A. Wolf, G. Gwinner</i>	479
1 Introduction	479
2 Principle of the Ives Stilwell Experiment	480
3 Ives-Stilwell Experiment at Storage Rings	481
4 Outlook	490
References	492

Tests of Lorentz Symmetry in the Spin-Coupling Sector

<i>R.L. Walsworth</i>	493
1 Introduction	493
2 $^{129}\text{Xe}/^3\text{He}$ maser (Harvard-Smithsonian Center for Astrophysics)	494
3 Hydrogen Maser (Harvard-Smithsonian Center for Astrophysics)	497
4 Spin-Torsion Pendula (University of Washington and Tsing-Hua University)	499
5 K/ ^3He Co-Magnetometer (Princeton University)	502
References	504

Do Evanescent Modes Violate Relativistic Causality?

<i>G. Nimtz</i>	506
1 Introduction	506
2 Wave Propagation	508
3 Photonic Barriers, Examples of Evanescent Modes	510
4 Evanescent Modes Are not Observable	515
5 Velocities, Delay Times, and Signals	516
6 Partial Reflection: An Experimental Method to Demonstrate Superluminal Signal Velocity of Evanescent Modes.....	522
7 Evanescent Modes a Near Field Phenomenon	524
8 Superluminal Signals Do not Violate Primitive Causality	527
9 Summary.....	529
