Preface xvii

Chapter 1	Introduction to Knowledge-Based Systems	1
1.1	Natural and Artificial Intelligence	1
1.2	Testing the Intelligence	4
1.2.1	Turing Test	4
1.2.2	Weakness of the Turing Test	5
1.2.3	Chinese Room Experiment	5
1.3	Application Areas of Artificial Intelligence	7
1.3.1	Mundane Tasks	7
1.3.2	Formal Tasks	8
1.3.3	Expert Tasks	9
1.4	Data Pyramid and Computer-Based Systems	10
1.4.1	Data	13
1.4.2	Information	14
1.4.3	Knowledge	15
1.4.4	Wisdom and Intelligence	17
1.4.5	Skills Versus Knowledge	17
1.5	Knowledge-Based Systems	18
1.6	Objectives of KBS	18
1.7	Components of KBS	19
1.8	Categories of KBS	20
1.8.1	Expert Systems	21
1.8.2	Database Management Systems in Conjunction with an Intelligent User Interface	21
1.8.3	Linked Systems	22
1.8.4	CASE-Based Systems	22
1.8.5	Intelligent Tutoring Systems	22
1.9	Difficulties with the KBS	23
1.9.1	Completeness of Knowledge Base	23
1.9.2	Characteristics of Knowledge	23

- 1.9.3 Large Size of Knowledge Base 23
- 1.9.4 Acquisition of Knowledge 24
- 1.9.5 Slow Learning and Execution 24
- 1.10 Warm-Up Questions, Exercises, and Projects 25

Chapter 2 Knowledge-Based Systems Architecture 29

- 2.1 Source of the Knowledge 29
- 2.2 Types of Knowledge 30
 - 2.2.1 Commonsense and Informed Commonsense Knowledge 30
 - 2.2.2 Heuristic Knowledge 30
 - 2.2.3 Domain Knowledge 30
 - 2.2.4 Metaknowledge 31
 - 2.2.5 Classifying Knowledge According to Its Use 31
 - 2.2.6 Classifying Knowledge According to Its Nature 31
- 2.3 Desirable Characteristics of Knowledge 33
- 2.4 Components of Knowledge 33
 - 2.4.1 Facts 33
 - 2.4.2 Rules 34
 - 2.4.3 Heuristics 34
- 2.5 Basic Structure of Knowledge-Based Systems 34
- 2.6 Knowledge Base 35
- 2.7 Inference Engine 36
 - 2.7.1 Modus Ponens 36
 - 2.7.2 Modus Tollens 37
 - 2.7.3 Forward Chaining 38
 - 2.7.4 Backward Chaining 38
 - 2.7.5 Forward Versus Backward Chaining 39
 - 2.7.6 Conflict Resolution Strategies for Rule-Based Systems 42
- 2.8 Self-Learning 42
- 2.9 Reasoning 42
- 2.10 Explanation 43
- 2.11 Applications 43
 - 2.11.1 Advisory Systems 43
 - 2.11.2 Health Care and Medical Diagnosis Systems 44
 - 2.11.3 Tutoring Systems 44
 - 2.11.4 Control and Monitoring 44
 - 2.11.5 Prediction 44
 - 2.11.6 Planning 45
 - 2.11.7 Searching Larger Databases and Data Warehouses 45
 - 2.11.8 Knowledge-Based Grid and Semantic Web 45
- 2.12 Knowledge-Based Shell 45
- 2.13 Advantages of Knowledge-Based Systems 46
 - 2.13.1 Permanent Documentation of Knowledge 46
 - 2.13.2 Cheaper Solution and Easy Availability of Knowledge 46

2.13.3	Dual Advantages of Effectiveness and Efficiency	47
2.13.4	Consistency and Reliability	47
2.13.5	Justification for Better Understanding	47
2.13.6	Self-Learning and Ease of Updates	47
2.14	Limitations of Knowledge-Based Systems	48
2.14.1	Partial Self-Learning	48
2.14.2	Creativity and Innovation	48
2.14.3	Weak Support of Methods and Heuristics	48
2.14.4	Development Methodology	49
2.14.5	Knowledge Acquisition	49
2.14.6	Structured Knowledge Representation and Ontology Mapping	50
2.14.7	Development of Testing and Certifying Strategies and Standards for Knowledge-Based Systems	50
2.15	Warm-Up Questions, Exercises, and Projects	51

Chapter 3 Developing Knowledge-Based Systems 55

3.1	Nature of Knowledge-Based Systems	55
3.2	Difficulties in KBS Development	55
3.2.1	High Cost and Effort	56
3.2.2	Dealing with Experts	56
3.2.3	The Nature of the Knowledge	56
3.2.4	The High Level of Risk	56
3.3	Knowledge-Based Systems Development Model	58
3.4	Knowledge Acquisition	60
3.4.1	Knowledge Engineer	60
3.4.2	Domain Experts	60
3.4.3	Knowledge Elicitation	60
3.4.4	Steps of Knowledge Acquisition	60
3.5	Existing Techniques for Knowledge Acquisition	62
3.5.1	Reviewing the Literature	62
3.5.2	Interview and Protocol Analysis	62
3.5.3	Surveys and Questionnaires	63
3.5.4	Observation	63
3.5.5	Diagram-Based Techniques	63
3.5.6	Generating Prototypes	63
3.5.7	Concept Sorting	63
3.6	Developing Relationships with Experts	64
3.7	Sharing Knowledge	64
3.7.1	Problem Solving	65
3.7.2	Talking and Storytelling	65
3.7.3	Supervisory Style	65
3.8	Dealing with Multiple Experts	65
3.8.1	Handling Individual Experts	66

3.8.2	Handling Experts in Hierarchical Fashion	66
3.8.3	Small-Group Approach	66
3.9	Issues with Knowledge Acquisition	67
3.10	Updating Knowledge	67
3.10.1	Self-Updates	67
3.10.2	Manual Updates by Knowledge Engineer	67
3.10.3	Manual Updates by Experts	68
3.11	Knowledge Representation	68
3.12	Factual Knowledge	70
3.12.1	Constants	70
3.12.2	Variables	70
3.12.3	Functions	70
3.12.4	Predicates	71
3.12.5	Well-Formed Formulas	71
3.12.6	First-Order Logic	71
3.13	Representing Procedural Knowledge	72
3.13.1	Production Rules	72
3.13.2	Semantic Networks	73
3.13.3	Frames	75
3.13.4	Scripts	76
3.13.5	Hybrid Structures	76
3.13.6	Semantic Web Structures	79
3.14	Users of Knowledge-Based Systems	80
3.15	Knowledge-Based System Tools	80
3.15.1	C Language Integrated Production System (CLIPS)	82
3.15.2	Java Expert System Shell (JESS)	85
3.16	Warm-Up Questions, Exercises, and Projects	90

Chapter 4 Knowledge Management 95

4.1	Introduction to Knowledge Management	95
4.2	Perspectives of Knowledge Management	96
4.2.1	Technocentric	96
4.2.2	Organizational	97
4.2.3	Ecological	97
4.3	What Drives Knowledge Management?	97
4.3.1	Size and Dispersion of an Organization	97
4.3.2	Reducing Risk and Uncertainty	98
4.3.3	Improving the Quality of Decisions	98
4.3.4	Improving Customer Relationships	98
4.3.5	Technocentric Support	98
4.3.6	Intellectual Asset Management and Prevention of Knowledge Loss	99
4.3.7	Future Use of Knowledge	99

4.3.8	Increase Market Value and Enhance an Organization's Brand Image	99
4.3.9	Shorter Product Cycles	99
4.3.10	Restricted Access and Added Security	99
4.4	Typical Evolution of Knowledge Management within an Organization	100
4.4.1	Ad-hoc Knowledge	100
4.4.2	Sophisticated Knowledge Management	100
4.4.3	Embedded Knowledge Management	100
4.4.4	Integrated Knowledge Management	100
4.5	Elements of Knowledge Management	100
4.5.1	People and Skills	101
4.5.2	Procedures	102
4.5.3	Strategy and Policy	102
4.5.4	Technology	102
4.6	The Knowledge Management Process	102
4.6.1	Knowledge Discovery and Innovation	103
4.6.2	Knowledge Documentation	104
4.6.3	Knowledge Use	104
4.6.4	Knowledge Sharing Through Pull and Push Technologies	104
4.7	Knowledge Management Tools and Technologies	104
4.7.1	Tools for Discovering Knowledge	104
4.7.2	Tools for Documenting Knowledge	105
4.7.3	Tools for Sharing and Using Knowledge	106
4.7.4	Technologies for Knowledge Management	108
4.8	Knowledge Management Measures	111
4.9	Knowledge Management Organization	112
4.10	Knowledge Management Roles and Responsibilities	113
4.10.1	Chief Knowledge Officer (CKO)	114
4.10.2	Knowledge Engineer (KE)	114
4.10.3	Knowledge Facilitator (KF)	114
4.10.4	Knowledge Worker (KW)	114
4.10.5	Knowledge Consultant (KC)	115
4.11	Knowledge Management Models	115
4.11.1	Transaction Model	116
4.11.2	Cognitive Model	116
4.11.3	Network Model	117
4.11.4	Community Model	117
4.12	Models for Categorizing Knowledge	117
4.12.1	Knowledge Spiral Model	117
4.12.2	Knowledge Management Model	118
4.12.3	Knowledge Category Model	118
4.13	Models for Intellectual Capital Management	118
4.14	Socially Constructed Knowledge Management Models	119

- 4.15 Techniques to Model Knowledge 119
 - 4.15.1 CommonKADS 120
 - 4.15.2 Protégé 2000 122
- 4.16 K-Commerce 123
- 4.17 Benefits of Knowledge Management 123
 - 4.17.1 Knowledge-Related Benefits 124
 - 4.17.2 Organizational and Administrative Benefits 124
 - 4.17.3 Individual Benefits 124
- 4.18 Challenges of Knowledge Management 124
- 4.19 Warm-Up Questions, Exercises, and Projects 125

Chapter 5 Fuzzy Logic 129

- 5.1 Introduction 129
- 5.2 Fuzzy Logic and Bivalued Logic 130
 - 5.2.1 Fuzzy Versus Probability 130
- 5.3 Fuzzy Logic and Fuzzy Sets 131
- 5.4 Membership Functions 132
 - 5.4.1 Fuzzification 133
 - 5.4.2 Defuzzification 133
- 5.5 Operations on Fuzzy Sets 134
 - 5.5.1 Intersection of Fuzzy Sets 134
 - 5.5.2 Union of Fuzzy Sets 134
 - 5.5.3 Complements of Fuzzy Sets 134
 - 5.5.4 Equality of Fuzzy Sets 135
- 5.6 Types of Fuzzy Functions 135
 - 5.6.1 Quasi-Fuzzy Membership Functions 135
 - 5.6.2 Triangular Fuzzy Membership Functions 135
 - 5.6.3 Trapezoidal Fuzzy Membership Function 136
- 5.7 Linguistic Variables 136
 - 5.7.1 Linguistic Hedges 137
- 5.8 Fuzzy Relationships 138
- 5.9 Fuzzy Propositions 142
 - 5.9.1 Fuzzy Connectives 142
- 5.10 Fuzzy Inference 144
- 5.11 Fuzzy Rules 144
- 5.12 Fuzzy Control System 145
- 5.13 Fuzzy Rule-Based System 147
 - 5.13.1 Models of Fuzzy Rule-Based Systems 147
- 5.14 Type-1 and Type-2 Fuzzy Rule-Based Systems 147
 - 5.14.1 T2 FS Membership Functions 148
- 5.15 Modeling Fuzzy Systems 149
- 5.16 Limitations of Fuzzy Systems 150

- 5.17 Applications and Research Trends in Fuzzy Logic-Based Systems 150
- 5.18 Warm-Up Questions, Exercises, and Projects 152

Chapter 6 Agent-Based Systems 157

- 6.1 Introduction 157
- 6.2 What Is an Agent? 158
- 6.3 Characteristics of Agents 159
- 6.4 Advantages of Agent Technology 161
- 6.5 Agent Typologies 162
 - 6.5.1 Collaborative Agent 162
 - 6.5.2 Interface Agent 163
 - 6.5.3 Mobile Agent 163
 - 6.5.4 Information Agent 166
 - 6.5.5 Hybrid Agent 166
- 6.6 Agent Communication Languages 167
- 6.7 Standard Communicative Actions 169
- 6.8 Agents and Objects 169
- 6.9 Agents, AI, and Intelligent Agents 171
- 6.10 Multiagent Systems 173
 - 6.10.1 Layered Architecture of a Generic Multiagent System 174
- 6.11 Knowledge Engineering-Based Methodologies 178
 - 6.11.1 MAS-CommonKADS 179
 - 6.11.2 DESIRE 180
- 6.12 Case Study 180
 - 6.12.1 Partial Discharge Diagnosis Within a GIS 180
 - 6.12.2 Intelligent Agents for GIS Monitoring 181
- 6.13 Directions for Further Research 184
- 6.14 Warm-Up Questions, Exercises, and Projects 184

Chapter 7 Connectionist Models 189

- 7.1 Introduction 189
 - 7.1.1 Advantages and Disadvantages of Neural Networks 190
 - 7.1.2 Comparing Artificial Neural Networks with the von Neumann Model 191
- 7.2 Biological Neurons 192
- 7.3 Artificial Neurons 192
- 7.4 Neural Network Architectures 194
 - 7.4.1 Hopfield Model 194
 - 7.4.2 Learning in a Hopfield Network Through Parallel Relaxation 195
 - 7.4.3 Perceptrons 195
 - 7.4.4 Perceptron Learning Rule 198
 - 7.4.5 Fixed-Increment Perceptron Learning Algorithms 198
 - 7.4.6 Multilayer Perceptrons 200
 - 7.4.7 Back-Propagation Algorithms 201

7.5	Learning Paradigms	205
7.6	Other Neural Network Models	207
7.6.1	Kohonen Maps	207
7.6.2	Probabilistic Neural Networks	208
7.7	Integrating Neural Networks and Knowledge-Based Systems	209
7.8	Applications for Neural Networks	210
7.8.1	Applications for the Back-Propagation Model	211
7.9	Warm-Up Questions, Exercises, and Projects	212

Chapter 8 Genetic Algorithms 215

8.1	Introduction	215
8.2	Basic Terminology	216
8.3	Genetic Algorithms	218
8.4	Genetic Cycles	219
8.5	Basic Operators of a Genetic Algorithm	219
8.5.1	Mutation	220
8.5.2	Crossover	220
8.5.3	Selection	222
8.6	Function Optimization	223
8.6.1	Stopping Criteria	226
8.7	Schema	226
8.7.1	Schema Defined	227
8.7.2	Instance, Defined Bits, and Order of Schema	227
8.7.3	The Importance of Schema Results	227
8.8	Ordering Problems and Edge Recombination	228
8.8.1	Traveling Salesperson Problem	228
8.8.2	Solutions to Prevent Production of Invalid Offspring	229
8.8.3	Edge Recombination Technique	229
8.9	Island-Based Genetic Algorithms	230
8.10	Problem Solving Using Genetic Algorithms	230
8.11	Bayesian Networks and Genetic Algorithms	232
8.12	Applications and Research Trends in GA	233
8.13	Warm-Up Questions, Exercises, and Projects	236

Chapter 9 Soft Computing Systems 239

9.1	Introduction to Soft Computing	239
9.2	Constituents of Soft Computing	240
9.3	Characteristics of Soft Computing	243
9.3.1	Simulation of Human Expertise	243
9.3.2	Innovative Techniques	243
9.3.3	Natural Evolution	243
9.3.4	Model-Free Learning	243

9.3.5	Goal-Driven	244
9.3.6	Extensive Numerical Computations	244
9.3.7	Dealing with Partial and Incomplete Information	244
9.3.8	Fault Intolerance	244
9.4	Neuro-Fuzzy Systems	244
9.4.1	Fuzzy Neural Networks	246
9.4.2	Cooperative Neuro-Fuzzy Model	246
9.4.3	Concurrent Neuro-Fuzzy Model	246
9.4.4	Hybrid Neuro-Fuzzy Model	247
9.5	Genetic-Fuzzy Systems	247
9.5.1	Genetic Algorithms Controlled by Fuzzy Logic	248
9.5.2	Fuzzy Evolutionary Systems	248
9.5.3	Evolving Knowledge Bases and Rule Sets	250
9.6	Neuro-Genetic Systems	251
9.6.1	Neural Network Weight Training	253
9.6.2	Evolving Neural Nets	254
9.7	Genetic-Fuzzy-Neural Networks	257
9.8	Chaos Theory	259
9.8.1	Basic Constructs	259
9.8.2	Hybridization	262
9.9	Rough Set Theory	263
9.9.1	Pawlak's Information System	263
9.9.2	Rough Sets	265
9.9.3	Rough Logic	267
9.9.4	Rough Models	268
9.9.5	Rough-Set-Based Systems	268
9.10	Applications of Soft Computing	270
9.11	Warm-Up Questions, Exercises, and Projects	272

Chapter 10 Knowledge-Based Multiagent System Accessing Distributed Database Grid: An E-Learning Solution 277

10.1	Introduction and Background	277
10.1.1	E-learning Defined	277
10.1.2	Major Components of E-learning	278
10.1.3	Objectives of E-learning	279
10.1.4	Advantages of E-learning	279
10.2	Existing E-learning Solutions: Work Done So Far	279
10.3	Requirements for an Ideal E-learning Solution	280
10.3.1	Quality Parameters for an Ideal E-learning Solution	281
10.4	Toward a Knowledge-Based Multiagent Approach	283
10.4.1	Objectives of a Knowledge-Based Multiagent E-learning Solution	284
10.4.2	Introduction to Multiagent Systems	284
10.4.3	Advantages of a Knowledge-Based Multiagent Approach for E-learning	285

10.5	System Architecture and Methodology	286
10.5.1	System Agents	287
10.5.2	Interaction Between Agents	288
10.5.3	Middleware Services	288
10.6	Knowledge Representation and System Output	289
10.7	Results of the Experiment	291
10.7.1	Advantages Achieved	292
10.8	Conclusion	292

Chapter 11 Knowledge-Intensive Learning: Diet Menu Planner 297

11.1	Introduction	297
11.2	Case Retrieval	299
11.2.1	The Identify Features	299
11.2.2	Matching	299
11.3	Case Reuse	300
11.4	Case Revision	301
11.5	Case Retention	301
11.6	Organization of Cases in Memory	302
11.7	DietMaster	303
11.7.1	General Menu-Planning Process for Diabetic Patients	304
11.7.2	The DietMaster Architecture	305
11.8	Knowledge Model	308
11.9	Representation of Different Knowledge Types	308
11.9.1	Case Structure	310
11.9.2	General Knowledge	310
11.9.3	Rules	311
11.9.4	Procedures	314
11.10	Problem Solving in DietMaster	316
11.11	Integrated Reasoning in DietMaster	317
11.12	Problem Solving and Reasoning Algorithm	319
11.13	The Learning Process	319
11.13.1	The Learning Algorithm	319
11.14	Feedback on Diet Plan	320
11.15	Conclusion	322

Chapter 12 Natural Language Interface: Question Answering System 323

12.1	Introduction	323
12.1.1	Open-Domain Question Answering	327
12.1.2	Closed-Domain Question Answering	328
12.2	Natural Language Interface to Structured Data	328
12.3	Natural Language Interface to Unstructured Data	331
12.4	Different Approaches to Language	334

12.4.1	Symbolic (Rule-Based) Approach	335
12.4.2	Empirical (Corpus-Based) Approach	335
12.4.3	Connectionist Approach (Using a Neural Network)	336
12.5	Semantic-Level Problems	336
12.6	Shallow Parsing	338
12.6.1	Semantic Symmetry	338
12.6.2	Sentence Patterns and Semantic Symmetry	339
12.6.3	An Algorithm	340
12.7	Ambiguous Modification	341
12.8	Conclusion	344

Index 347
