Foreword **v**

Preface **vii**

Chapter 1 **Introduction** **1**

The problems Where are we headed? The ecosystem approach
Classification of land as ecosystems Ecosystem-based planning
Predicting effects Levels of integration Structure: the basis of
classification Need for recognizing ecosystems at various scales
Ecosystem geography Do we know enough? Need to delineate
ecosystem boundaries

Chapter 2 **Scale of Ecosystem Units** **23**

Site Landscape mosaic Ecoregion National hierarchy of
ecological units

Chapter 3 **The Question of Boundary Criteria** **27**

Gestalt method Map-overlay method Multivariate clustering
method Digital-image processing method Controlling factors
method Vegetation and/or fauna as a basis for ecosystem
delineation Soil as a basis for ecosystem delineation
Physiography as a basis for ecosystem delineation Watersheds as a
basis for ecosystem delineation Aquatic biota as a basis for
ecosystem delineation Analysis of controlling factors

Chapter 4	Role of Climate in Ecosystem Differentiation	39
	Hydrologic cycle Landforms and erosion cycles Life cycles Fire regimes Plant productivity Controls over the climatic effect and scale	
Chapter 5	Macroscale: Macroclimatic Differentiation	51
	Latitude Thermally defined zones Moisture-defined zones Continental position Climatic subzones Köppen climate classification system Subdivisions of a subzone Elevation Effect of latitude on altitudinal zonation Effect of latitude and altitude on inland waters Azonal highlands Macroclimatic differentiation in review	
Chapter 6	Ecoclimatic Zones of the Earth	77
	Criteria used in delineating ecoregion levels The domains Polar domain Humid temperate domain Dry domain Humid tropical domain The provinces Ecoregion maps Local contrasts within zones	
Chapter 7	Ecoregions of the United States	83
	100 Polar domain 120 Tundra division 130 Subarctic division 200 Humid temperate domain 210 Warm continental division 220 Hot continental division 230 Subtropical division 240 Marine division 250 Prairie division 260 Mediterranean division 300 Dry domain 310 Tropical/subtropical steppe division 320 Tropical/subtropical desert division 330 Temperate steppe division 340 Temperate desert division 400 Humid tropical domain 410 Savanna division 420 Rainforest division Mountains with altitudinal zonation American ecoregions in review	
Chapter 8	Mesoscale: Landform Differentiation	105
	Principal landform classes Effect of lakes on zonation Effect of landform on site patterns Geologic substratum Effect of geology on zonal boundaries Levels of landform differentiation Landforms in review	

Chapter 9

Microscale: Edaphic-Topoclimatic Differentiation

121

Slope-aspect and ground conditions Geologic differentiation
Soil-moisture ecoclimatic grid Zonal site types Azonal site types
Intrazonal site types Examples Southern Ontario, Canada Colorado Front Range Human influences on ecosystems and present-day systems

Chapter 10

Applications of Ecosystem Geography

143

Determining the mapping units How differently would we operate? Sites are seen within the context of the larger system
Relationships Ecosystem units and functional inventories
Ecosystem units and hydrologic units Examples of useful correlations and applications Sampling networks for monitoring Estimation of ecosystem productivity Global change Spatial transferability of models Links between terrestrial and aquatic systems Aquatic biota Hydrology
Ecosystem diversity Significance to ecosystem management
Management hierarchies and ecosystem hierarchies Common permanent units for integrated management Worldwide application Conclusion

Chapter 11

Summary and Conclusions

157

Mapping criteria Management hierarchies and ecosystem hierarchies Human dimensions

Appendix

Ecoregions of the Oceans

161

Polar Domain Temperate Domain Tropical Domain

Glossary
