

T A B L E O F C O N T E N T S

INTRODUCTION.....	V
TABLE OF CONTENTS.....	IX
I. CLIMATIC VARIATIONS.....	1
Ch. 1 - Evidence for two Pleistocene climatic modes : data from DSDP Site 502. G.G. Start and W.L. Prell.....	3
Ch. 2 - Ice age data for climate modelling from an antarctic (dome C) ice core. M. de Angelis, J. Jouzel, C. Lorius, L. Merlivat, J.R. Petit and D. Raynaud.....	23
Ch. 3 - European glaciological data and their relation with the climate. L. Reynaud.....	47
Ch. 4 - Instrumental and phenomenological data series for Bologna during the XVIII century : an overview and an approach to their practical use. S. Comani and E. Caroli.....	61
Ch. 5 - Statistical model for daily precipitation. S. Morelli and R. Santangelo.....	69
II. GLOBAL CLIMATE MODELS.....	79
Ch. 1 - Carbon dioxide concentration doubling and solar constant changing : the role of clouds in influencing the climatic response. G. Maltese, G. Visconti and G. Fiocco.....	81
Ch. 2 - Solar control of terrestrial temperatures. G.M. Brown and I.T. Price.....	93
Ch. 3 - A new global oceanic cloud climatology for climate modelling. N.A. Hughes and A. Henderson-Sellers.....	115
Ch. 4 - Albedo-climate feedback : the importance of cloud and cryosphere variability. K.P. Shine, A. Henderson-Sellers and R.G. Barry.....	135
GENERAL CIRCULATION MODELS.....	157
Ch. 1 - The use of general circulation models in climate modelling. J.F.B. Mitchell.....	159

X.	
Ch. 2 - January and July performance of the LMD general circulation model. R. Sadourny and K. Laval.....	173
Ch. 3 - The importance of cloud-radiation interaction for the simulation of climate. H. Le Treut and K. Laval.....	199
Ch. 4 - Effect of parameterisation of evapotranspiration on climate simulated by a GCM. K. Laval, C. Ottlé, A. Perrier and Y. Serafini.....	223
Ch. 5 - Variable depth oceanic mixed layer interaction in a general circulation model. M.J. Horgan, D.R. Davies and A.M. Gadian.....	249
Ch. 6 - A sensitivity experiment to astronomical forcing with a spectral GCM for the simulation of July 125k years BP. J.F. Royer and P. Pestiaux	269
NONLINEAR PROBLEMS AND STOCHASTIC ASPECTS.....	287
Ch. 1 - Long period free oscillations in a three-component climate model. B. Saltzman, A. Sutera and A. R. Hansen.....	289
Ch. 2 - Study of Euro-Atlantic blocking. A. Speranza...	299
Ch. 3 - On the treatment of radiation in the entropy budget of the earth-atmosphere system. U. Callies and F. Herbert.....	311
Ch. 4 - On a new fluctuation-dissipation theorem in climate dynamics. C. Nicolis.....	331
Ch. 5 - Milankovitch forcing of stochastically perturbed simple climate models. R. Benzi.....	351
Ch. 6 - Application of seasonal stochastic climate models to sea surface temperature data. A. Ruiz de Elvira.....	373
AUTHORS INDEX.....	393
SUBJECT INDEX.....	399
