

CONTENTS

<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
1. New Insights into Signaling During Myelination in Zebrafish	1
Alya R. Raphael and William S. Talbot	
1. Introduction	2
2. Schwann Cell Development	2
3. Neuregulin1/ErbB Signaling	4
4. Gpr126	8
5. New Roles for Schwann Cells	9
6. Oligodendrocytes	11
7. Conclusions and Future Directions	13
Acknowledgments	13
References	14
2. Wnt Signaling: Signaling at and Above the Receptor Level	21
Tina Buechling and Michael Boutros	
1. Overview of Wnt Signal Transduction Cascades	22
2. Wnt Proteins: Different Branches of Signaling	23
3. Regulation of Wnt Signaling Above the Receptor Level	30
4. Regulation of Wnt Signaling Pathways at the Receptor Level	40
5. Conclusions and Perspective	42
Acknowledgments	44
References	44
3. Notch-Independent Functions of CSL	55
Jane E. Johnson and Raymond J. MacDonald	
1. Introduction	56
2. CSL as a Repressor	59
3. CSL as a Notch-Independent Transcriptional Activator	62
4. Role of <i>cis</i> -Regulatory Modules in Determining Target Gene Transcription	66
5. Role of Competition Between CSL-Containing Complexes—Is CSL a Limiting Factor?	67
6. Concluding Remarks	68

Acknowledgments	69
References	69
4. Sonic Hedgehog Signaling in the Developing CNS: Where It Has Been and Where It Is Going	75
Michael P. Matisse and Hui Wang	
1. Prologue: Identification of Shh	76
2. Setting the Stage: Shh Signaling During Nervous System Regionalization	77
3. I Am Dying to Hear from You: The Range of Shh Signaling in the CNS	78
4. Character Creation: Production and Secretion of Shh Protein	79
5. Won't You Take My Hand: Shh-Binding Proteins and Diffusion	81
6. Character Development: Transduction of Shh Signal in Receiving Cells	84
7. Cutting in on the Dance: The Interplay Between Ptc and Smo	86
8. Taking It to the Extreme: The Central Role of the Primary Cilium in Shh Signaling	86
9. Stepping into the Dark: How Does Smo Control Gli Phosphorylation?	89
10. Are You Going to Use That Thing? Smo as a G-Protein-Coupled Receptor	92
11. Being in the Right Place at the Right Time: Shh–Gli Signaling and Patterning in the Ventral Neural Tube	94
12. Walking Down the Runway: A Model for Shh–Gli Control of Early Progenitor Patterning	97
13. What's It Gonna Be, Boy? GliA Versus GliR-Regulated Genes	99
14. New Game: Distinct Mechanisms for GliA- and GliR-Mediated Transcription	101
15. Summary and Further Questions	104
References	105
5. Activity-Mediated Synapse Formation: A Role for Wnt-Fz Signaling	119
Macarena Sahores and Patricia C. Salinas	
1. Introduction	120
2. Wnts and Their Receptors	120
3. The Role of Wnt Signaling in Synapse Formation	122
4. Role of Neuronal Activity in Wnt-Mediated Dendrite Morphogenesis	128
5. Role of Neuronal Activity in Wnt-Mediated Synapse Formation	129
6. Concluding Remarks	132
Acknowledgments	132
References	132

6. Signaling Pathways and Axis Formation in the Lower Metazoa	137
Thomas W. Holstein, Hiroshi Watanabe, and Suat Özbek	
1. Introduction	138
2. Animal Relationships and the Origin of the Basal Metazoa	141
3. Wnt Signaling	145
4. TGF- β and BMP Signaling	149
5. Negative Regulators of BMP and Wnt Signaling	154
6. Axis Formation and Regeneration in Basal Metazoans	156
7. Conclusions and Outlook	165
Acknowledgment	166
References	166
7. FGF and ROR2 Receptor Tyrosine Kinase Signaling in Human Skeletal Development	179
Sigmar Stricker and Stefan Mundlos	
1. Introduction	180
2. FGF Signaling: Craniosynostosis, Digit Abnormalities, and Short Stature	183
3. The Atypical Receptor TK ROR2 and WNT Signaling	190
References	196
