

CONTENTS

Introduction	9
1. Scenario of nuclear war. Calculations of dose fields and radioactive contamination ..	11
1.1. Scenario of nuclear war	11
1.2. Method for calculating dose fields and radioactive contamination (without considering the destruction of nuclear power plants)	11
1.3. Calculations of dose fields and radioactive contamination taking into account the destruction of atomic power plants	15
1.4. Distribution of doses and radioactive contamination in the regions of a nuclear conflict and the territories with different population density	16
1.5. Conclusion	17
2. "Radiation shock" and radioactive contamination. The impact on terrestrial ecosystems	20
2.1. Introduction	20
2.2. Comparative radiosensitivity of various organisms and communities	20
2.3. Radiation damage of forest communities — I. Acute irradiation	22
2.4. Radiation damage of forest communities — II. Acute-chronic irradiation	23
2.5. Radiation damage of forest communities — III. Chronic irradiation	25
2.6. The effect of irradiation on the germinative capacity of seeds and the growth of seedlings	26
2.7. Radiation damage of other ecosystems	27
2.8. The impact of irradiation on animal populations	28
2.9. Secondary effects of radiation damage to ecosystems	29
2.10. The geographical distribution of radiation damage of communities	29
2.11. Conclusion	32
3. Burning of vegetation (forest and grassland fires)	33
3.1. Introduction	33
3.2. Some characteristics of "ordinary" forest fires	33
3.3. Estimation of the scale of FF after a nuclear war	34
3.4. The composition and quantitative value of products produced by FF	36
3.5. The influence of FF on the optical properties and chemical composition of the lower layer of the atmosphere	36
3.6. Secondary "post-nuclear" and peatbog fires	37
3.7. Conclusion	38
4. "Nuclear winter" and "nuclear night" and their impact on ecosystems	39
4.1. Introduction	39
4.2. "Nuclear winter" — decrease in temperature and illumination	39
4.3. Mechanisms of low temperature impact on plants	40
4.4. The influence of decreased illumination on the transition to a state of dormacy ...	42
4.5. Estimations of death of vegetation and animals	42
4.6. Conclusion	47
5. "Ordinary" pollution	48
5.1. Introduction	48
5.2. Estimations of the emission of heavy metals and oxides of nitrogen and sulphur as a result of a nuclear war (without considering the burning of vegetation)	49
5.3. The effect of pollution by heavy metals on land ecosystems	52
5.4. "Acid" rainfall	53
5.5. Emissions of carbon	55
5.6. Oil pollution of shelf zones after a nuclear war	55
5.7. Conclusion	58

6.	Ultra-violet (UV)-radiation	60
6.1.	Estimation of changes in UV-radiation	60
6.2.	The effect of UV-radiation on the biota	62
6.3.	Conclusion	65
7.	The evolution of ecosystems after a nuclear war. "Nuclear successions"	66
7.1.	Introduction	66
7.2.	Coniferous forests in the northern hemisphere	66
7.3.	Deciduous forests in the northern hemisphere	67
7.4.	Grasslands	67
7.5.	Tropical and subtropical rain and monsoon forests, savannah	67
7.6.	Use of modelling of global biospheric processes	68
7.7.	Global biochemical cycles	68
7.8.	The process of the renewal of vegetation (modelling)	69
7.9.	The geographical distribution of the process of vegetation renewal	72
7.10.	The problem of reduction in the diversity of species and the stability of the biosphere	72
7.11.	Conclusion	74
8.	The impact of factors of nuclear war on fresh water ecosystems	75
8.1.	Introduction	75
8.2.	Calculation of concentrations of radioactive contamination in fresh water ecosystems	75
8.3.	Calculation of dose loads	80
8.4.	Contamination of fresh water body systems by heavy metals	81
8.5.	Conclusion	81
8.6.	Appendix	82
9.	Nuclear conflict, agro-ecosystems and the food supply problem	85
9.1.	Introduction	85
9.2.	Consequences for the agro-ecosystems of developed countries	85
9.3.	The food supply problem in developing countries	85
9.4.	Conclusion	88
10.	Demographic catastrophe	90
10.1.	Introduction	90
10.2.	Somatic (medical) consequences of a nuclear conflict for the human population	90
10.3.	Human population dynamics after a nuclear war	91
10.4.	Outbreak of epidemics	94
10.5.	Genetic consequences of a nuclear conflict on the human population	98
10.6.	Conclusion	103
11.	Simulations of consequences of a nuclear war using the model of global biosphere processes	105
11.1.	Model of global biosphere processes created at the Computer Center of the USSR Academy of Sciences	105
11.2.	Scenario	105
11.3.	Results of calculations	106
11.4.	Conclusion	107
12.	Conclusion	108
	Literature	109
