

Contents

Preface	vii
1 The How, When, and Why of Mathematics	1
Spotlight: George Pólya	10
Tips on Doing Homework	14
2 Logically Speaking	17
3 Introducing the Contrapositive and Converse	31
4 Set Notation and Quantifiers	39
Tips on Quantification	51
5 Proof Techniques	53
Tips on Definitions	61
6 Sets	63
Spotlight: Paradoxes	72
	xiii

7 Operations on Sets	79
8 More on Operations on Sets	89
9 The Power Set and the Cartesian Product	97
Tips on Writing Mathematics	106
10 Relations	109
Tips on Reading Mathematics	115
11 Partitions	119
Tips on Putting It All Together	127
12 Order in the Reals	129
Tips: You Solved It. Now What?	144
13 Functions, Domain, and Range	147
Spotlight: The Definition of Function	157
14 Functions, One-to-One, and Onto	163
15 Inverses	175
16 Images and Inverse Images	191
Spotlight: Minimum or Infimum	199

17 Mathematical Induction	207
18 Sequences	223
19 Convergence of Sequences of Real Numbers	237
20 Equivalent Sets	251
21 Finite Sets and an Infinite Set	261
22 Countable and Uncountable Sets	271
23 Metric Spaces	283
24 Getting to Know Open and Closed Sets	297
25 Modular Arithmetic	313
26 Fermat's Little Theorem	331
Spotlight: Public and Secret Research	337
27 Projects	343
Tips on Talking about Mathematics	343
27.1 Picture Proofs	346
27.2 The Best Number of All	348
27.3 Set Constructions	350
27.4 Rational and Irrational Numbers	353
27.5 Irrationality of e and π	355
27.6 When Does $f^{-1} = 1/f$?	358
27.7 Pascal's Triangle	360
27.8 The Cantor Set	362
27.9 The Cauchy–Bunyakovsky–Schwarz Inequality	366
27.10 Algebraic Numbers	368
27.11 The RSA Code	371
Spotlight: Hilbert's Seventh Problem	374
28 Appendix	379
28.1 Algebraic Properties of $\mathbb{R}$	379

xvi Contents

28.2	Order Properties of $\mathbb{R}$	380
28.3	Pólya's List	382
	References	383
	Index	389
