

Analyses of microbial communities at biogeochemical interfaces and their interaction with organic pollutants in soil

Von der Fakultät für Lebenswissenschaften
der Technischen Universität Carolo-Wilhelmina
zu Braunschweig

zur Erlangung des Grades eines
Doktors der Naturwissenschaften

(Dr. rer. nat)

genehmigte

Dissertation

Von Guo-chun Ding

aus Jiangsu, China

Summary	3
Introduction to the ph.D. thesis	7
Chapter 1: General introduction.....	8
1.1 Soil is a complex platform for microbes.....	8
1.2 Questions to answer in soil microbial ecology.....	10
1.3 Nucleic acid based methods to study soil microbial communities	11
1.3.1 Sampling and nucleic acid isolation.....	11
1.3.2 PCR and quantitative Real-Time PCR (Q-PCR).....	12
1.3.3 Methods to study microbial community structure.....	14
1.3.4 Methods to study the function of soil microbial community	17
1.4 The interactions between soil microbes and organic pollutants	21
1.4.1 Primers specifically detecting key PAH degrading genes.....	22
1.4.2 Important taxonomic groups responding to PAH contaminations	23
1.4.3 Applications of functional gene arrays and metagenomic library	23
1.4.4 Mobile genetic elements (MGE)	24
1.5 Outlook: Biogeochemical interfaces in soils	25
1.5.1 Absorption/desorption of charcoal, clay minerals and iron oxides to pollutants.	25
1.5.2 Influence of charcoal, clay minerals and iron oxides on the function and structure of soil microbial community.....	26
Chapter 2: Cultivation-independent detection of genes present in soil bacteria	34
Chapter 3: Soil type-dependent responses to phenanthrene as revealed by determining the diversity and abundance of polycyclic aromatic hydrocarbon ring- hydroxylating dioxygenase genes using a novel PCR detection system	58
Chapter 4: Responses of microbial communities in two different soils to phenanthrene spiking as revealed by GeoChip analysis	87
Chapter 5: Establishment of a novel primer system targeting conserved stretches in the <i>rep-oriV</i> region of IncP-9 plasmids	108

Chapter 6: Similar bacterial populations increased in two different phenanthrene
spiked soils from distant geographic sites as revealed by DGGE and pyrosequencing
of 16S rRNA gene fragments..... 116

Chapter 7: Microbial community assembled on artificial soils as studied by PCR-
DGGE and pyrosequencing..... 147

Outlook 174
