1 On the relevance of identities, communities, groups, and networks to the economics of poverty alleviation 1
CHRISTOPHER B. BARRETT

2 Toward an economic theory of dysfunctional identity 12
HANMING FANG AND GLENN C. LOURY

3 Polarization: concepts, measurement, estimation 56
JEAN-YVES DUCLOS, JOAN ESTEBAN, AND DEBRAJ RAY

4 Evolutionary equilibrium with forward-looking players 106
LAWRENCE E. BLUME

5 Is inequality an evolutionary universal? 125
SAMUEL BOWLES

6 Bridging communal divides: separation, patronage, integration 146
INDRANEEL DASGUPTA AND RAVI KANBUR

7 The extended family system and market interactions 171
KARLA HOFF AND ARIJIT SEN

8 Social divisions within schools: how school policies can affect students' identities and educational choices 188
GEORGE A. AKERLOF AND RACHEL E. KRANTON

9 Smallholder identities and social networks: the challenge of improving productivity and welfare 214
CHRISTOPHER B. BARRETT

10 Social networks in Ghana 244
CHRISTOPHER R. UDRY AND TIMOTHY G. CONLEY

11 Coping with disaster: morals, markets, and mutual insurance – using economic experiments to study recovery from Hurricane Mitch 268
MICHAEL R. CARTER AND MARCO CASTILLO

12 The role of ethnicity and networks in agricultural trade: evidence from Africa 288
MARCEL FAFCHAMPS

13 Altruism, household co-residence and women's health investment in rural Bangladesh 317
ANDREW D. FOSTER

14 Self-help groups and income generation in the informal settlements of Nairobi 337
ELIANA LA FERRARA

15 Community ties and land inheritance in the context of rising outside opportunities: evidence from the Peruvian Highlands 361
TATIANA GOETGHEBUER AND JEAN-PHILIPPE PLATTEAU

Index 403

Figures

2.1 The value differences from the autarky value V_A as functions of ρ: $p_l = 0.5, p_m = 0.2, l = 1, m = 6, h = 10, \delta = 0.99$ 42
2.2 Relevant value differences as function of δ: $p_l = 0.5, p_m = 0.2, l = 1, m = 6, h = 10, \rho = 0.5$ 44
2.3 Relevant value differences as function of δ: $p_l = 0.5, p_m = 0.2, l = 1, m = 6, h = 10, \rho = 0.8$ 44
2.4 The value differences from the autarky value V_A as functions of ρ: $p_l = 0.3, p_m = 0.4, l = 2, m = 6, h = 10, \delta = 0.99$ 45
2.5 Relevant value differences as function of δ: $p_l = 0.3$, $p_m = 0.4$, $l = 2, m = 6, h = 10$, $\rho = 0.8$ 46
3.1 A single squeeze cannot increase polarization 60
3.2 A double squeeze cannot lower polarization 61
3.3 A "symmetric outward slide" must raise polarization 61
3.4 Estimated densities for the US, UK, and Czech Republic, Wave 3 74
3.5 Three basic densities 78
3.6 Four basic densities 90
4.1 A coordination game 117
5.1 Payoffs in the contract game 129
5.2 Expected payoffs depend on the distribution of play in the previous period 130
5.3 The state space 131
5.4 Modified contract game payoffs 133
5.5 Contrasting contracts 133
5.6 Efficient and equal conventions are persistent when deviant behavior is unintentional 135
5.7 Unequal conventions persist when deviant behavior is intentional and the poor outnumber the rich 138
5.8 The collective action problem 141
6.1 OP = 1 160
7.1 The basin of attraction of the kin system is $[0, m^*)$ 183

7.2 An increase in market opportunities foregone as a result of the kin system decreases the basin of attraction of the kin system is $[0, m^*)$ to $[0, m^{**})$ 184
10.1 (a) Information and credit networks and (b) labor and land networks in village 1 251
10.2 (a) Information and credit networks and (b) labor and land networks in village 2 252
10.3 (a) Information and credit networks and (b) labor and land networks in village 3 253
10.4 (a) Information and credit networks and (b) labor and land networks in village 4 254
11.1 Coping and recovery from environmental shocks 270
14.1 Subjective and objective heterogeneity 353

Tables

3.1 LIS country codes 69
3.2 Polarization indices and polarization rankings (Rkg) from LIS Wave 3 70
3.3 Polarization indices and polarization rankings (Rkg) from LIS Wave 4 71
3.4 Alienation and identification – LIS Wave 3 72
10.1 Incidence of network connections 250
10.2 Incidence of network connections conditional on the existence of alternative links 255
10.3 Summary statistics of link characteristics 256
10.4 Predicting network links 257
10.5 Predicting network links, with 2-way fixed effects 260
11.1 Descriptive statistics on loss and recovery 272
11.2 Descriptive statistics for shares sent and returned 276
11.3 First stage community norm regressions 280
11.4 Second stage estimate of social interactions 281
11.5 Second stage asset growth and recovery regressions 282
12.1 Characteristics of surveyed traders 293
12.2 Potential discrimination factors 294
12.3 Transaction technology 294
12.4 Whether credit is offered by supplier (estimator is ordered probit) 296
12.5 Number of suppliers known at start-up 300
12.6 Number of clients known at start-up 302
12.7 Start-up working capital 304
12.8 Growth in the number of suppliers known 306
12.9 Growth in the number of clients known 308
12.10 Growth in working capital 310
13.1 Standard deviations for actual and simulated data by assumed substitutability of own and co-resident's health 328
13.2 Estimates of household division model by substitutability of own and co-resident's health 329

13.3	Effects of family unit characteristics on maternal BMI equations by residence status with and without correction for the selectivity of the joint residence decision cross-sectional estimates	330
13.4	Effects of family unit characteristics on maternal BMI by residence status with and without correction for the selectivity of the joint residence decision longitudinal estimates	333
14.1	Basic group characteristics	343
14.2	Earnings functions	345
14.3	Dependence on group for income	347
14.4	Ability to borrow, individual determinants	348
14.5	Ability to borrow, group determinants	350
14.6	Borrowing from group vs. members	352
14.7	Organization of production and heterogeneity	355
14A.1	Summary statistics	358
15.1	Sample sizes of family stories (FS) decomposed by community	368
15.2	Sample size of individuals concerned by the FS collected, as per community	369
15.3	The age structure of sample respondents	369
15.4	Permanent migrants as a proportion of the total sample population, as per community	375
15.5	Proportions of sample individuals above 15 years who are involved in various types of migrations	375
15.6	Proportions of (permanent) migrants according to the present age of the individuals	376
15.7	Decomposition of sample population according to education level and gender	376
15.8	Incidence of formal education as per community	377
15.9	Time trends in formal education	377
15.10	Index values measuring the degree of self-financing of post-primary school studies, and percentages of pupils who bore at least part of the resulting cost, as per gender	378
15.11	Index values measuring the degree of self-financing of post-primary school studies, and percentages of pupils who bore at least part of the resulting cost, as per community	378
15.12	Evolution over time of the index measuring the degree of self-financing of post-primary school studies, and of the percentage of pupils who bore at least part of the resulting cost	379
15.13	Differences between educational levels of migrants and non-migrants, as well as between educational levels of various types of migrants	380
15.14	Coefficients of correlation between within-family average educational levels and proportions of migrants	380
15.15	Comparing subjective wealth rankings and irrigated land owned, as per community	381

15.16 Comparing subjective wealth rankings and land purchased, as per community 382
15.17 Relationship between subjectively assessed wealth migration and education 382
15.18 Reasons adduced by parents to justify unequal division of family land, as per community and per decreasing order of importance in the whole sample 384
15.19 Evolution over time of the relative frequencies of education and migration as sources of discrimination in land inheritance 386
15.20 Rates of discrepancy between perceptions by parents and data-based assessments about the equal/unequal character of land inheritance 387
15.21 Assessing the impact of migration on land inheritance patterns 388
15.22 Assessing the impact of children's education on land inheritance patterns 388
15.23 Assessing the impact of subjectively assessed wealth on the inheritance pattern 389
15.24 Estimations of logit models to identify the determinants of unequal land inheritance 393
