| I. CONTENT .....  | I    |
| II. FIGURES.....  | IV   |
| III. TABLES.....  | VIII |
| IV. SYMBOLS.....  | X    |
| V. UNITS .....  | XIV  |
| VI. ABBREVIATIONS.....  | XIV  |
| VII. PRELIMINARY CONSIDERATIONS.....                              | XV   |
| 1. INTRODUCTION.....  | 1    |
| 1.1. Field vegetable production in early spring .....             | 1    |
| 1.1.1. The production system .....                                | 2    |
| 1.1.2. Conventional plastic film management.....                  | 4    |
| 1.2. Objectives of the thesis.....                                | 6    |
| 2. MATERIAL AND METHODS.....                                      | 9    |
| 2.1. Field experiments.....                                       | 9    |
| 2.1.1. Treatments and experimental layout.....                    | 9    |
| 2.1.2. Site descriptions.....                                     | 12   |
| 2.1.3. Data collection .....                                      | 12   |
| 2.1.3.1. Microclimate .....                                       | 13   |
| 2.1.3.2. Plant growth.....  | 14   |
| 2.1.3.3. Quality measures.....                                    | 16   |
| 2.2. Additional experiments.....                                  | 17   |
| 2.3. Statistical and computational methods .....                  | 18   |
| 2.3.1. Parameter estimation methods .....                         | 19   |
| 2.3.2. Data mining methods for classification and regression..... | 19   |
| 2.3.2.1. Logistic regression .....                                | 19   |
| 2.3.2.2. Random forest .....                                      | 21   |
| 2.3.2.3. Support vector machines .....                            | 22   |
| 2.4. Measurement of leaf area index .....                         | 25   |
| 2.5. Modeling microclimate and plant growth .....                 | 26   |
| 2.5.1. Soil water flow .....                                      | 27   |
| 2.5.1.1. Model functions .....                                    | 27   |
| 2.5.1.2. Parameterization with the 'Hyprop' system.....           | 28   |
| 2.5.2. Soil heat flow .....                                       | 30   |
| 2.5.2.1. Model function .....                                     | 30   |
| 2.5.2.2. Parameterization with the Hukseflux TP01 sensor.....     | 30   |

|            |   |           |
|------------|---|-----------|
| 2.5.3.     | Ball-Berry-Leuning model of stomata conductance .....                             | 31        |
| 2.5.4.     | Radiation transfer .....  | 33        |
| 2.5.4.1.   | Fractions of diffuse and direct short wave radiation .....                        | 33        |
| 2.5.4.2.   | Optical properties of flux participating surfaces.....                            | 35        |
| 2.5.4.3.   | Leaf angle distribution function, clumping factor and extinction coefficient..... | 38        |
| <b>3.</b>  | <b>RESULTS AND DISCUSSION .....</b>   | <b>40</b> |
| 3.1.       | Leaf area index measurement methods .....   | 40        |
| 3.2.       | Parameterization and test of established submodels.....                           | 41        |
| 3.2.1.     | Parameters describing soil water flow .....                                       | 41        |
| 3.2.1.1.   | Soil water retention .....  | 41        |
| 3.2.1.2.   | Unsaturated hydraulic conductivity .....  | 43        |
| 3.2.2.     | Soil thermal conductivity .....   | 44        |
| 3.2.3.     | Ball-Berry-Leuning model of stomata conductance .....                             | 46        |
| 3.2.4.     | Radiation transfer .....  | 48        |
| 3.2.4.1.   | Test of the diffuse fraction models .....   | 49        |
| 3.2.4.2.   | Optical properties of flux participating surfaces .....                           | 50        |
| 3.2.4.2.1. | Covers.....   | 50        |
| 3.2.4.2.2. | Leaves.....   | 55        |
| 3.2.4.2.3. | Soils .....   | 57        |
| 3.2.4.3.   | Leaf angle distribution function, clumping index and extinction coefficient ..... | 59        |
| 3.3.       | Development and test of new submodels .....                                       | 61        |
| 3.3.1.     | A dynamic model for leaf area growth in lettuce and kohlrabi .....                | 61        |
| 3.3.1.1.   | Derivation of the model.....  | 61        |
| 3.3.1.2.   | Calibration and validation .....  | 63        |
| 3.3.2.     | The short wave radiation budget of film covered canopies .....                    | 66        |
| 3.3.3.     | Modeling the dry matter accumulation in kohlrabi .....                            | 69        |
| 3.4.       | Modeling vegetable quality .....  | 72        |
| 3.4.1.     | Objectification of head consistency scorings.....                                 | 73        |
| 3.4.2.     | Modeling the presence of side shoots in lettuce .....                             | 77        |
| 3.4.3.     | Modeling the turnip form in kohlrabi.....   | 82        |
| <b>4.</b>  | <b>CONCLUSIONS .....</b>  | <b>86</b> |
| <b>5.</b>  | <b>SUMMARY.....</b>   | <b>89</b> |
| <b>6.</b>  | <b>APPENDIX .....</b>   | <b>91</b> |
| 6.1.       | Experimental designs.....   | 91        |
| 6.1.1.     | Großbeeren 2010 .....   | 91        |
| 6.1.2.     | Großbeeren 2011 .....   | 92        |
| 6.1.3.     | Großbeeren 2012 .....   | 93        |
| 6.1.4.     | Golzow 2010 .....   | 94        |
| 6.1.5.     | Golzow 2011 .....   | 95        |
| 6.1.6.     | Golzow 2012 .....   | 96        |
| 6.1.7.     | Schifferstadt 2010.....   | 97        |
| 6.1.8.     | Schifferstadt 2011.....   | 98        |
| 6.1.9.     | Schifferstadt 2012.....   | 99        |
| 6.1.10.    | Schifferstadt 2013.....   | 100       |
| 6.2.       | Plot designs .....  | 101       |
