CONTENTS

Preface xi

1

1 CELLS

Cell Structure 1 Generalized Plant Cell Leaf Cells Cells of Vascular Tissue Root Cells Diffusion 9 Fick's First Law Continuity Equation and Fick's Second Law Time-Distance Relation for Diffusion. Membrane Structure 19 Membrane Models Organelle Membranes Membrane Permeability 26 Concentration Difference Across a Membrane Permeability Coefficient Diffusion and Cellular Concentration Cell Walls 32 Chemistry and Morphology Diffusion Across Cell Walls Stress-Strain Relations of Cell Wall Problems 41 References 42

2 WATER 44

Physical Properties 45

Hydrogen Bonding Surface Tension Capillary Rise Capillary Rise in the Xylem Tensile Strength Electrical Properties

Chemical Potential 54

Free Energy and Chemical PotentialAnalysis of Chemical PotentialStandardStateHydrostatic PressureWater Activity and Osmotic PressureThe Van'tHoff RelationMatric PotentialWater Potential

 Central Vacuole and Chloroplasts
 70

 Water Relations of the Central Vacuole
 Boyle-Van't Hoff Relation
 Osmotic

 Responses of Chloroplasts
 Water Potential and Plant Cells
 11

 Incipient Plasmolysis
 Activity and Water Potential of Water Vapor
 Plant-Air

 Incipient Plasmolysis
 Activity and Water Potential of Water Vapor
 Plant-Air

 Interface
 Pressure in the Cell Wall Water
 Water Flux

 Problems
 88

 References
 89

3 SOLUTES 91

Chemical Potential of Ions 92 Electrical Potential Electroneutrality and Membrane Capacitance Activity Coefficients of Ions Nernst Potential Example of E_{NK} Fluxes and Diffusion Potentials 100 Flux and Mobility Diffusion Potential in a Solution Membrane Fluxes Membrane Diffusion Potential-Goldman Equation Application of the Goldman Equation Donnan Potential Active Transport 118 Q_{lor} a Temperature Coefficient Ussing-Teorell Equation Electrogenicity Example of Active Transport Carriers, Solute Uptake, and the Michaelis-Menten Formalism Principles of Irreversible Thermodynamics 138 Fluxes, Forces, and Onsager Coefficients Water and Solute Flow Volume Values of Reflection Coefficients Flow, L_p , and a Solute Movement Across Membranes 148 The Influence of Reflection Coefficients on Incipient Plasmolysis Extension of the Boyle-Van't Hoff Relation Reflection Coefficients of Chloroplasts Problems 156 References 159

4 LIGHT 162

Wavelength and Energy 163 Light Waves Radiant Flux and Illumination Energy of Light Sunlight Absorption of Light by Molecules 175 Role of Electrons in Absorption Event Electron Spin and State Multiplicity Molecular Orbitals Light Absorption by Chlorophyll De-excitation 185 Fluorescence, Phosphorescence, and Radiationless Transitions Competing Pathways for De-excitation Lifetimes and Quantum Yields Absorption Spectra and Action Spectra 192 Vibrational Sublevels in an Energy Level Diagram The Franck-Condon Absorption Bands and Absorption Coefficients Principle Conjugation Action Spectra Absorption and Action Spectra of Phytochrome Problems 210 212 References

5 PHOTOSYNTHESIS 214

Chlorophyll-Chemistry and Spectra 217 Types and Structures Absorption and Fluorescence Emission Spectra Absorption Bands in vivo Other Photosynthetic Pigments 224 Carotenoids Phycobilins Excitation Transfers Among Photosynthetic Pigments 230 Resonance Transfer of Excitation Transfers of Excitation Between Photosynthetic Pigments **Excitation Trapping** Photosynthetic Units and Enhancement Effects 239 Photosynthetic Units Excitation Processing by Photosynthetic Units Photosynthetic Action Spectra and Enhancement Effects Composition of the Two Photosystems Electron Flow and Photophosphorylation 246 Electron Flow Components of the Electron Transfer Pathway Types of Electron Flow Photophosphorylation Problems 256 258 References

6 BIOENERGETICS 260

Gibbs Free Energy 261 Chemical Reactions and Equilibrium Constants Interconversion of Chemical and Redox Potentials Electrical Energy **Biological Energy Currencies** 271 ATP, Structure and Reactions Gibbs Free Energy Change for ATP Formation NADP-NADPH₂ Redox Couple Chloroplast Bioenergetics 279 Coupling of ATP Formation to Electron Flow Redox Couples Coupling Mechanism Mitochondrial Bioenergetics 288 Electron Flow Components-Redox Potentials Oxidative Phosphorylation Energy Flow in the Biosphere 293 Incident Light-Stefan-Boltzmann Law Absorbed Light and Photosynthetic Efficiency Food Chains and Material Cycles Problems 298 300 References

7 LEAVES 302

Resistances 303

Resistance of Unstirred Boundary Layer Adjacent to Leaf Unstirred Layer Thickness Stomata Stomatal Resistance Cuticular Resistance Resistance of Intercellular Air Spaces Fick's First Law and Resistances

 Water Vapor Fluxes Accompanying Transpiration
 313

 Resistance Network
 Values of Resistances
 Leaf Water Vapor

ConcentrationsExamples of Relative Humidity and c_{uvv} in LeavesFluxes ofWater VaporStomatal Control of /,,,,

CO₂ Fluxes Accompanying Photosynthesis 325 Resistance Network Mesophyll Area Cell Wall Resistance Plasmalemma Chloroplast Resistance Cytoplasmic Resistance Mesophyll Resistance Photosynthesis Respiration and Photorespiration Resistance Comprehensive CO₂ Resistance Network **Compensation** Points Fluxes of CO₂ Relationships Between J_{WV} and J_{GOz}

Energy Fluxes 343

Solar RadiationAbsorbed Infrared RadiationEmitted Infrared RadiationValues for a, a_m and e_{IR} Net RadiationExamples for RadiationTermsHeat Conduction and ConvectionExamples of Heat ConductionHeat FluxAccompanying TranspirationHeat Flux for Dew or Frost FormationExamples of Frost and Dew FormationShaded Leaves Within Plant

Communities

APPENDICES 413

- I Frequently Used Variables and Their Units 415
- II Frequently Used Constants and Their Numerical Values 419
- III Conversion Factors ATI

- IV Abbreviations and Symbols 427
- V Natural and Common Logarithms 431
- VI Calculus 435
- VII Gibbs Free Energy and Chemical Potential 451
- VIII Further Comments on Irreversible Thermodynamics 461
 - IX Measurement of Electrical Potential Differences Across Biological Membranes 466

ANSWERS TO PROBLEMS 473
