1	Introduction	1
	References	6
2	Functional Group Oriented Bond-Sets	9
2.1	Polar Bond Formation	9
2.1.1	Polar Synthons	12
2.1.2	<i>Bond Formation Between Two Functional Groups</i>	14
2.1.3	Umpolung	15
2.2	Bond-Sets According to Functional Group Presence	22
2.2.1	<i>1,2-Relationship Between Two Functional Groups</i>	22
2.2.2	<i>1,4-Relationship Between Two Functional Groups</i>	27
2.2.3	<i>1,3-Relationship Between Two Functional Groups</i>	34
2.2.4	<i>1,5-(and 1,6-) Relationship Between Two Functional Groups</i>	37
2.2.5	Conjunctive Reagents	38
	Problems	40
	References	41
3	Skeleton Oriented Bond-Sets	47
3.1	The FGA-Strategy for Preparing Branched Skeletons	49
3.2	Symmetry in the Molecular Skeleton	58
	Problems	61
	References	61
4	Building Block Oriented Synthesis	65
	Problems	70
	References	71

5	The Basis for Planning	73
	Problems	79
	References	79
6	Formation of Cyclic Structures	81
6.1	Anellated Bicycles and Anellated Polycycles	89
6.2	Bridged Bi- and Polycycles	97
6.3	“Overbred” Intermediates	106
	Problems	110
	References	112
7	Protecting Groups	119
	Problems	129
	References	130
8	Ranking of Synthesis Plans	133
	Problems	142
	References	144
9	Computer-Aided Synthesis Planning	145
	References	148
10	Stereogenic Centers and Planning of Syntheses	149
	Problems	161
	References	161
11	Enjoying the Art of Synthesis	165
11.1	Strychnine	166
11.2	Colchicine	178
11.3	Dysidiolide	185
11.4	Asteriscanolide	190
11.5	Lepadiformine	195
	References	200
12	Summary and Concluding Remarks	203
	References	205
13	Solutions to Problems	207
