## **Table of Contents**

1. G	eneral	l Introduction	1
1.1	Мусо	orrhiza	1
1.1	.1 D	efinition	1
1.1	.2 Ту	ypes of mycorrhizas	2
1.2	Arbus	scular mycorrhiza Symbiosis	2
1.2	2.1 TI	he biology of AM symbiosis	4
1	.2.1.1	The AM infective propagules - Sources of inoculum	4
1	.2.1.2	The AM asymbiotic and presymbiotic phases	5
1	.2.1.3	The AM intraradical phase	6
1	.2.1.4	The AM extraradical phase	7
1.2	2.2 Ca	arbon cost to the plant of sustaining the AM symbiosis	8
1.2	2.3 Be	enefits of the AM symbiosis to the plant	9
1	.2.3.1	The AM symbiosis and plant P nutrition	10
1	.2.3.2	The AM symbiosis and plant N nutrition	12
1.2	2.4 Tł	he effects of plant nutrition on the development of the AM symbiosis	14
1.3	Mana	gement of the mycorrhizosphere: Innovative symbiosis technology for	
susta	inable	vegetable production	15
1.4	Choic	e of experimental plant	17
2. Ge	eneral	l materials and methods	18
2.1	Descr	iption and preparation of experimental plant growth substrate	18
2.2	Prepar	ration of fungal compartments	19
2.3	Prepar	ration of fungal compartment substrate	19
2.4	Extrac	ction of ERM from fungal compartments	20
2.5	Myco	rrhiza inoculum	20
2.6	Establ	lishment of non-mycorrhizal control plants	21
2.7	Estim	ation of the AM fungal colonized root length	21
2.8	Estim	ation of hyphae length and number of spores	21
2.9	Nutrie	ent analysis	21

3. Intera	active effect of the $\mathrm{NO_3^-/NH_4^+}$ supply ratio and arbuscular
mycorrh	iza fungal inoculation on phosphorus uptake by cowpea plants
from spa	aringly available or soluble sources23
3.1 Ab	stract
3.2 Int	roduction
3.3 Ma	terials and methods
3.3.1	Planting, AM fungal inoculation and rock P amendment
3.3.2	Irrigation and nutrient supply27
3.3.3	Experimental set-up, growth conditions and leachate pH measurements
3.3.4	Harvest
3.3.5	Nutrient analysis and statistics
3.4 Res	sults
3.4.1	The pH of leachate draining from LP+RP pots after nutrient solution addition 29
3.4.2	Extent of AM fungal colonized root length
3.4.3	Plant growth
3.4.4	Leaf P concentration and P content
3.5 Dis	scussion
3.5.1	Effects of N (NO <sub>3</sub> <sup>-/</sup> NH <sub>4</sub> <sup>+</sup> ) fertilization ratio on rhizosphere pH and rock P
solubil	ization
3.5.2	Effects of AM fungal colonization on rock P solubilization
3.5.3	Plant P uptake
3.5.4	Phosphorus uptake and plant growth
3.5.5	The AM fungal colonized root length as affected by P and N treatments35
3.5.6	Conclusion
4. Influe	ence of applied Nitrogen-form $(NO_3^N vs. NH_4^+-N)$ on
mycorrh	iza development and N transfer by the arbuscular mycorrhiza
fungus G	Comus intraradices in symbiosis with cowpea
4.1 Abs	stract
4.2 Intr	oduction
4.3 Ma	terials and methods
4.3.1	Pre-cultivation and AM fungal inoculation40
4.3.2	Preparation of fungal compartments and fungal compartment substrate

4.3.3	Experimental set-up and growth conditions	41
4.3.4	Irrigation and harvest	43
4.3.5	Nutrient analysis and statistics	43
4.4 Re	esults	44
4.4.1	Extent of AM fungal colonized length of roots in the pot substrate	44
4.4.2	Plant growth	45
4.4.3	Tissue P concentration and plant P content	45
4.4.4	Tissue N concentration and plant N content	48
4.4.5	Development of ERM and AM fungal colonized length of roots in the	
compa	artments	
4.4.6	Nitrogen ( <sup>15</sup> N) uptake and transfer to the host plant by ERM	51
4.5 Di	scussion	54
4.5.1	Uptake and transfer of N by the ERM to the plant	54
4.5.2	Influence of sole supply of either $NO_3^-$ -N or $NH_4^+$ -N on AM fungal	
coloni	zation and development	56
4.5.2	2.1 Extent of AM fungal colonized length of roots in the pot substrate	
4.5.2	2.2 The AM fungal colonized root length and ERM development in the	
com	partments	56
4.5.3	Influence of the symbiosis on plant P nutrition and growth promotion	57
4.5.4	Conclusion	
5. Alka	line phosphatase activity of AM fungal extraradical hyp	ohae in
relation	to host plant P uptake, and in response to the presence	of the
nhytoos	tragana formananatin	50
51 41		
5.1 At	ver de ction	
5.2 In		
5.5 M	Refais and methods	
5.3.1	Planting and AM fungal inoculation	
5.3.2	Preparation of fungal compartments and fungal compartment substrate.	
5.3.3	Experimental set-up and growth conditions	
5.3.4	Irrigation and plant harvest	63
5.3.5	Harvest and analysis of ERM in the fungal compartments	63
5.3.6	Nutrient analysis and statistics	64

5.4 R	esults	65
5.4.1	Extent of AM fungal colonized root length	65
5.4.2	Plant growth	66
5.4.3	Shoot P concentration and plant P content	68
5.4.4	Extraradical mycelium development and hyphae ALP activity	69
5.4.	4.1 The DW of ERM harvested from fungal compartments	69
5.4.	4.2 Hyphae length of ERM harvested from fungal compartments	71
5.4.	4.3 Spore density of ERM harvested from fungal compartments	72
5.4.	4.4 The ALP active hyphae length of the ERM harvested from fungal	
com	partments	72
5.5 Di	scussion	74
5.5.1	The ALP activity of extraradical hyphae and P transport	74
5.5.2	Formononetin effect on the AM development and hyphae ALP activity	75
5.5.3	Extent of AM fungal colonized root length, hyphae development and plant	
respor	1se	76
554	Conclusion	79
0.0.1	Conclusion

6.5 D	iscussion
6.5.1	The AM development, P nutrition and plant growth response91
6.5.2	The development of ERM in fungal compartments as influenced by the plant
cultiv	ar94
6.5.3	Conclusion
7. A c	omparison of different inoculation techniques to improve the
practic	al application of AM fungi with a slow developing life cycle96
7.1 A	bstract
7.2 In	troduction
7.3 M	aterials and methods98
7.3.1	Inoculum propagation and preparation
7.3.2	Preparation of "soilboxes", substrate filling and AM fungal inoculation99
7.3.3	Planting, experimental set-up and growth conditions101
7.3.4	Preparation and insertion of "fungal tubes" 102
7.3.5	Harvest
7.3.6	Nutrient analysis and statistics
7.4 R	esults
7.4.1	Length of roots growing along the plexi-glass plate104
7.4.2	Extent of AM fungal colonized root length104
7.4.3	Plant growth105
7.4.4	Shoot P concentration and plant P content107
7.4.5	Root growth distribution in the soilbox107
7.4.6	The development of ERM in the fungal tubes108
7.4.7	Nitrogen ( <sup>15</sup> N) transfer to the host plant by ERM109
7.5 D	iscussion110
7.5.1	Influence of inoculation with intact mycelial network on P uptake and plant
growt	h promotion110
7.5.2	Influence of inoculum distribution on root colonization and relation to plant
growt	h111
7.5.3	The development of ERM and <sup>15</sup> N transfer to the plant111
7.5.4	Influence of mycorrhization on vertical root distribution112
7.5.5	Conclusion

8. G	eneral Discussion
8.1	Effects of N (NO <sub>3</sub> <sup>-</sup> vs. $NH_4^+$ ) fertilization ratio on mycorrhiza development and
nutr	ent uptake114
8.2	The ERM growth and hyphae ALP activity as markers for AM efficiency in terms
of p	ant nutrient acquisition116
8.3	Use of AM technology for improving cowpea production in P-poor soils 117
