

1. Introduction	1
2. The time-dependent variational principle (TDVP)	3
2.1 TDVP for non-normalized states	3
2.2 Parametrization of the wave function	5
2.3 Equations of motion	7
2.4 Symplectic structure	10
2.5 Complex analytic parametrization	11
3. Lie algebras and symplectic structures	15
3.1 Basic definitions	15
3.2 The group action on \mathcal{Y}_G , \mathcal{Y}_G^* and \mathcal{F}	17
3.3 Semisimple Lie algebras	20
3.4 Reduction of the symplectic form to an orbit	23
4. Symplectic structure on group representation spaces	25
4.1 Symplectic structures and representation spaces of a group	25
4.2 Analytic parametrization of orbits and symplectic structures for representations of real compact semi-simple groups	29
5. Geometry of the TDVP	37
5.1 Action of the group on the reference state	37
5.2 Non-degeneracy of the symplectic structure	39
5.3 The Hamiltonian	40
6. Simple applications	41
6.1 The Weyl group	41
6.2 The group $SU(2)$	45
6.3 The Lipkin model	53
7. The unitary group and examples from many-body physics	63
7.1 The unitary unimodular group $SU(3)$	63
7.2 Symplectic structure for the time-dependent Hartree-Fock method	71

8. The group $SU(1,1)$ and rotationally invariant Hamiltonians	77
8.1 The group $SL(2, \mathbb{R})$	77
8.2 Analytic parametrization for the group $SU(1,1)$	83
8.3 Rotationally invariant two-body Hamiltonians	88
9. Summary	94
